### Round Table

## **WHAT MODELS FOR EUROPEAN ENERGY GOVERNANCE?**

Organized as the concluding event of the project “**The future of the European energy policy: the Italian contribution**”, the Round Table aims to stimulate the Italian public debate on the EU energy policies, and in particular on the development of the 2030 energy and climate framework defined last January by the European Commission. In this context, the Round Table will discuss a set of technical proposals and models for the *governance* of the European energy policies. The results of the event will be presented to the Italian Presidency of the Council of the EU, in view of the European Council of October.

**Friday October 3, 2014**

**Edison Premises**

Via del Quirinale, 26  
Rome
